Docket No.: 21994-00011-US

**AMENDMENTS TO THE CLAIMS**

This listing of the claims will replace all prior versions of the claims in this application.

**Listing of Claims:**

1. (Currently amended) A recording apparatus of a video signal comprising:

a first recording means for recording a digital video signal of a moving picture information on a first recording medium;

a second recording means for recording a digital video signal of a still picture information on a second recording medium;

switch means for designating a preparation of recording said still picture information to be selectively pressed either halfway or all the way down; and

a display means for displaying either ~~one of~~ said moving picture information ~~and or~~ said still picture information ~~or both of them after processing them for altering a picture size on one screen when said switch means is operated;~~

a processing means for controlling the processing means to change the size of a picture of either one of the moving picture information and the still picture information or both of them to be displayed on the display means, and controlling the display of both the moving picture information and still picture information outputted from the processing means on the display means simultaneously when the switch is pressed halfway down; and

wherein the control means controls the second recording means to record a digital video signal of a still picture information on the second recording medium when the switch is pressed all the way down.

Application No.: 09/640,002

Docket No.: 21994-00011-US

~~said recording apparatus records said still picture information to be recorded on the second recording medium after said still picture information is confirmed.~~

2. (Currently amended) A recording method of a video signal comprising steps of:

recording a digital video signal of a moving picture information on a first recording medium;

~~recording a digital video signal of a still picture information on a second recording medium;~~

~~displaying either one of said the moving picture information on a display means; and said still picture information or both of them after processing them for altering a picture size on one screen when a switch means for designating a preparation of recording said still picture information is operated; and~~

producing a still picture information to be recorded on a second recording medium extracted from the moving picture information;

displaying at least either one of a moving picture information and a still picture information on the display means by changing the size of at least either one of the moving picture information and the still picture information when a switch is selectively pressed down halfway or all the way down; and

recording said a digital video signal of a still picture information to be recorded on the second recording medium after said still picture information is confirmed when the switch is pressed all the way down.
